

Tuesday Seminar Series

Spring 2016

2:00-2:50pm

Biology/Physics Building 130

January

26th

Andrew Gardner, New England Biolabs (Host: Dr. Papke)
"Studying DNA replication at high temperatures using novel experimental approaches."

February

4th

Dr. Patrick Murphy, Massachusetts Institute of Technology
"A Splice in Time: Alternative Splicing Regulation and Functions in Flow-induced Arterial Inflammation."

11th

Dr. Kari Lenhart, University of Pennsylvania
"Modified cytokinesis and coordination in a stem cell niche."

16th

Dr. Hannah Seidel, University of Wisconsin, Madison
"Nutritional control of germline stem cells in *C. elegans*."

18th

Dr. Aoife Therese Heaslip, University of Vermont
"Taking the scenic route: Vesicle trafficking in *Toxoplasma gondii*."

March

3rd

Dr. Ofer Rog, University of California, Berkeley
"The Synaptonemal Complex is a Liquid Crystal."
In vivo Imaging Sheds Light on Chromosome Dynamics During Sexual Reproduction

8th

Dr. Teresita Padilla-Benavides, UMass Medical
"Adventures with heavy metals: Copper transport from bacteria to eukaryotic cells."

April

5th

Dr. Lois Pollack, Cornell University (Host: Dr. Cole)
"Pioneering new methods for exploring DNA or RNA binding partners."

12th

Dr. Nolwenn Dheilly, Stony Brook University (Host: Dr. Klassen)
"Looking beyond the red queen: microorganisms as drivers of host-parasite interactions."

19th

Dr. Patrick Schloss, University of Michigan (Host: Dr. Broderick)
"Microbiome Dysbiosis in Health and Disease."

26th

Dr. Eric Edsinger, Marine Biological Laboratory (Host: Dr. Nyholm)
"Idiosepius pygmy squid: Establishing a molecular genetic model organism for cephalopods."
