“Uncovering Unknown Unknowns of Gene Regulation”

Identification of genes and processes associated with specific biological phenotypes is a fundamental step toward understanding the molecular basis of development and pathogenesis. This seminar will discuss the use of integrative systems biology approaches to uncover unknown unknowns of gene regulation.

Date: Tuesday, October 23rd, 2018
Reception: 3:30 PM
Seminar: 4:00 PM
Place: BPB 130
Hosted by: Ken Campellone

If you require an accommodation to participate in this event, please contact the Department of MCB at mcboffice@uconn.edu and 860-486-4329 at least 5 days in advance of the event.
